

[0041]-

AMENDMENTS TO THE SPECIFICATION

Please replace Paragraph [0041] with the following paragraph rewritten in amendment format:

[0041] Radial support members 150A – 150C are formed along each of the frame body portions 22A – 22C. The radial support members 150A - 150C and the complementary apertures 24A – 24C in the metal sleeves 20A – 20C are collectively referred to as bit receiving portions. The radial support members 150A – 150C facilitate smooth insertion and retraction of the drill bits 40A – 40C by providing partial radial boundaries or partial cylindrical walls for the drill bits 40A – 40C. As shown in the drawings, the radial support members 150B and 150C of the frame body portions ~~page-like bit holders~~ 22B and 22C occupy a partial circumferential boundary of the apertures 24B and 24C. Preferably, complimentary radial support members 150A – 150C are disposed at axially offset locations of the apertures and occupy an unbounded circumferential portion of the apertures. The axial offset of the radial support members 150A – 150C on opposite sides of the frame body portions 22A – 22C ~~page-like bit holders~~ facilitate the molding of the frame body portions 22A – 22C ~~page-like bit holders~~.
